

# Video Game Spaces: Image, Play and Structure in 3D Worlds (2008) by Michael Nitsche

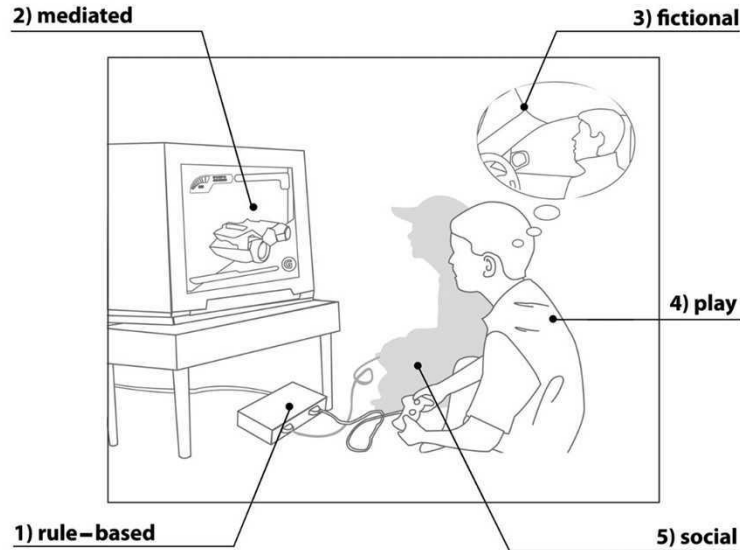

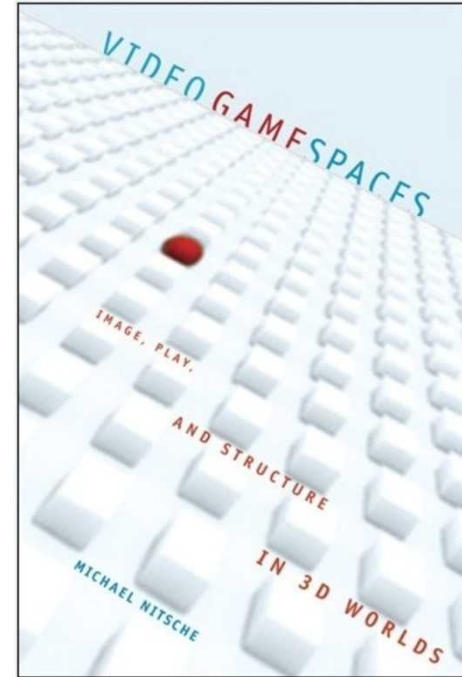

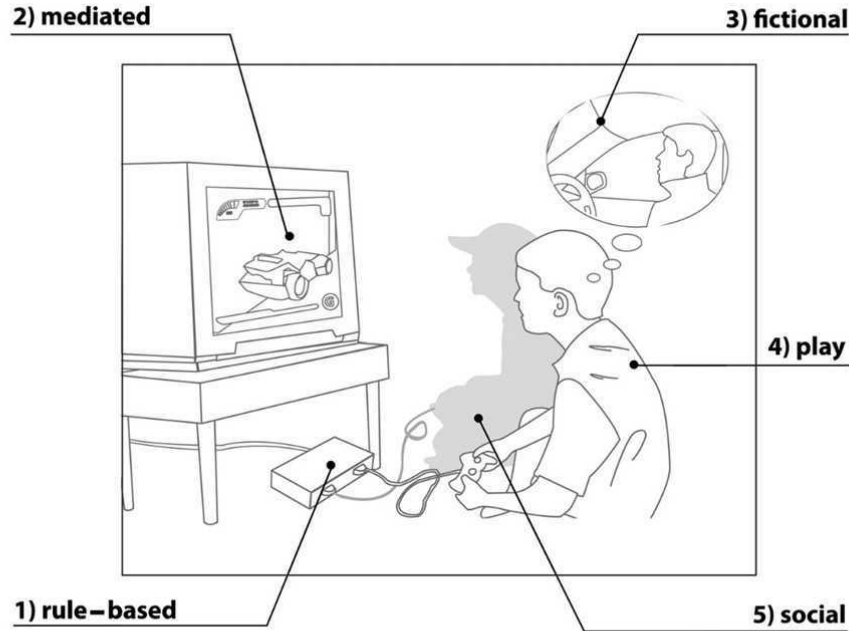

Figure 1.1 Five analytical planes

# Video Game Spaces by Michael Nitsche

**Figure 1.1** Five analytical planes

- 1) mathematical rules, code
- 2) audiovisual representation
- 3) imagination of the player
- 4) interactive performance
- 5) social and cultural extension of the game

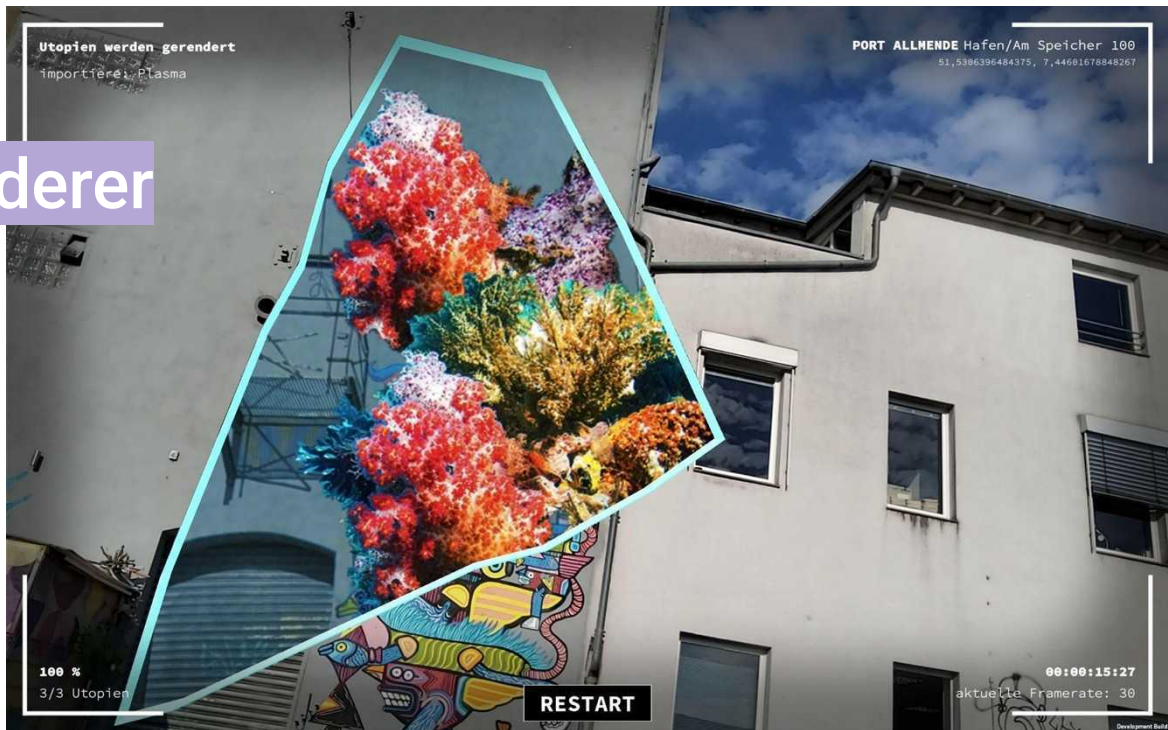

# Case Study:

# Utopien-Renderer

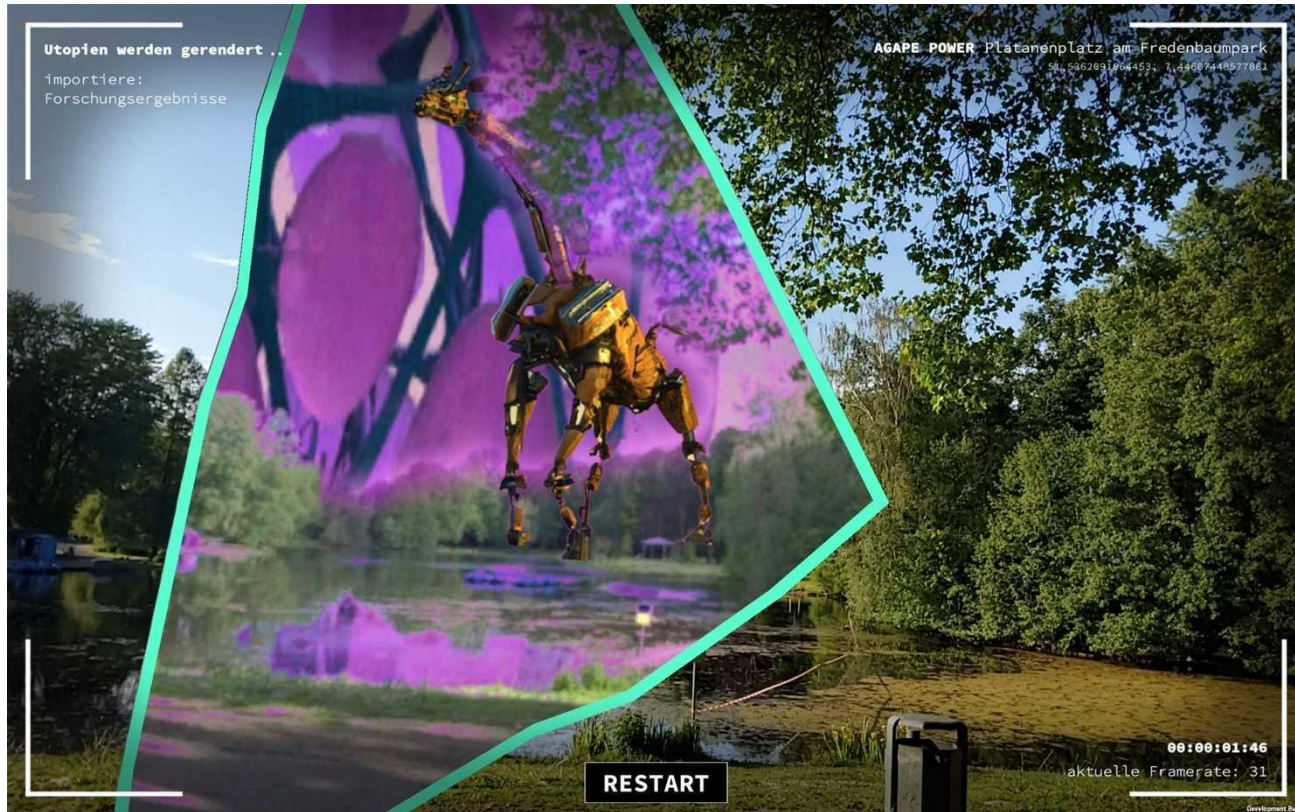

# 105 x 68. Wir regeln das. Theater Dortmund

## Der Utopien-Renderer

Premiere: 4. June 2022 | Theater Dortmund  
Concept and Directing: Christiane Hütter  
Augmented Reality: Sarah Buser, Judith Hanke  
Stage: Cordula Körber  
Currency App: Michael Sträubig, Kolja Kleinschmidt  
Video: Daniela Sülwold, Tobias Hoeft  
Dramaturgy Kirsten Möller  
a Theater Dortmund production

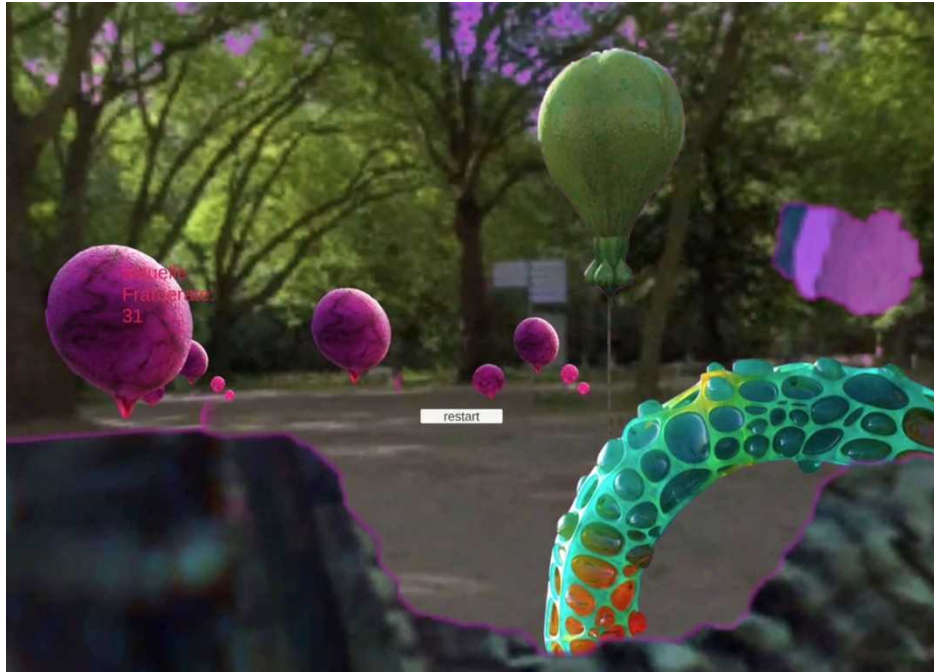

# Der Utopien-Renderer

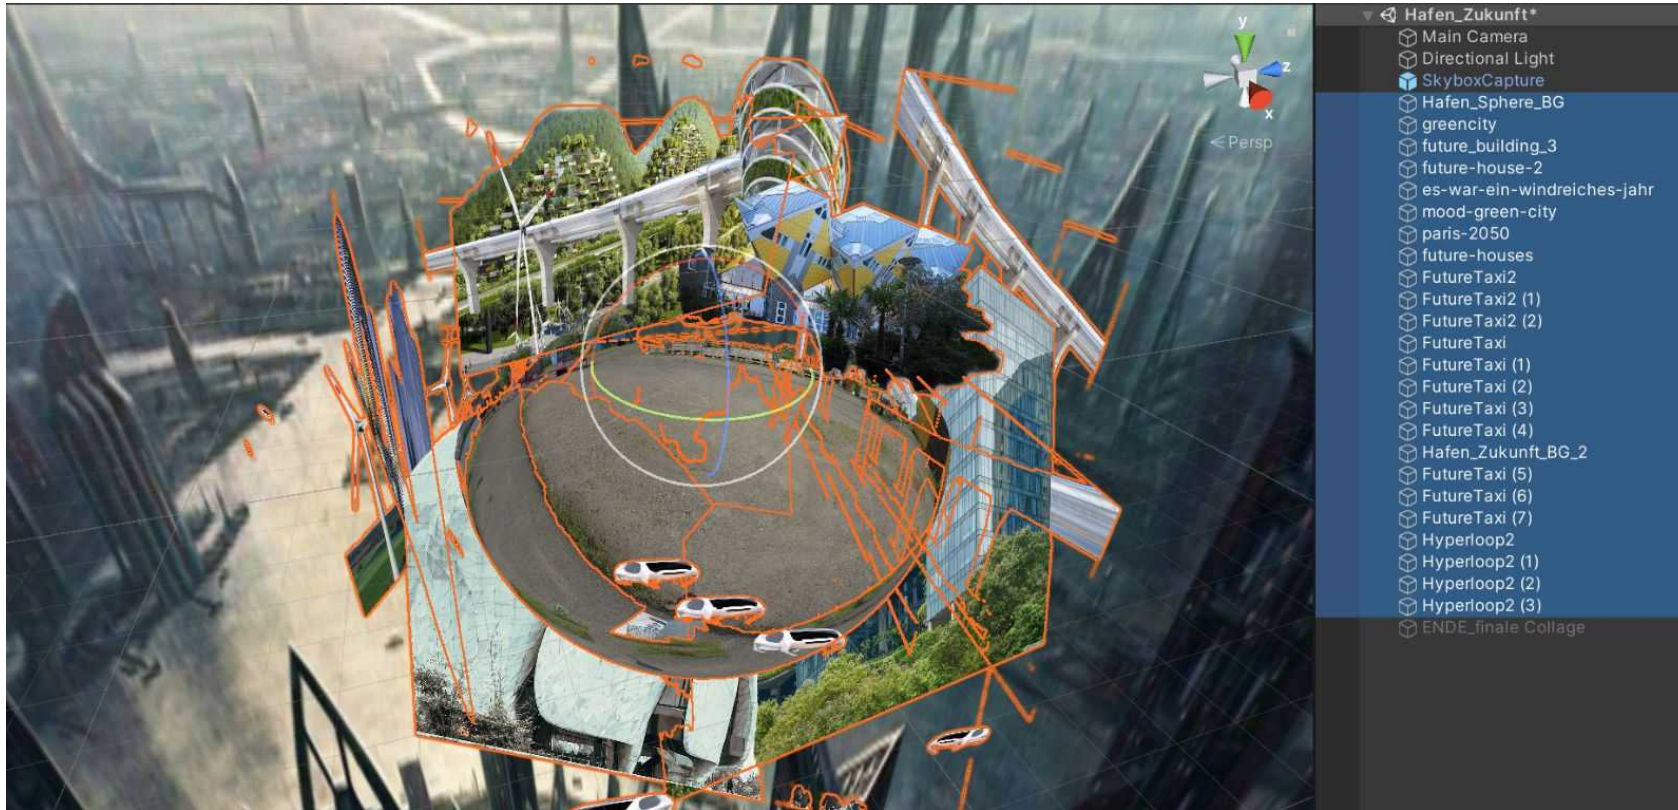

# 360 fotos & image collage

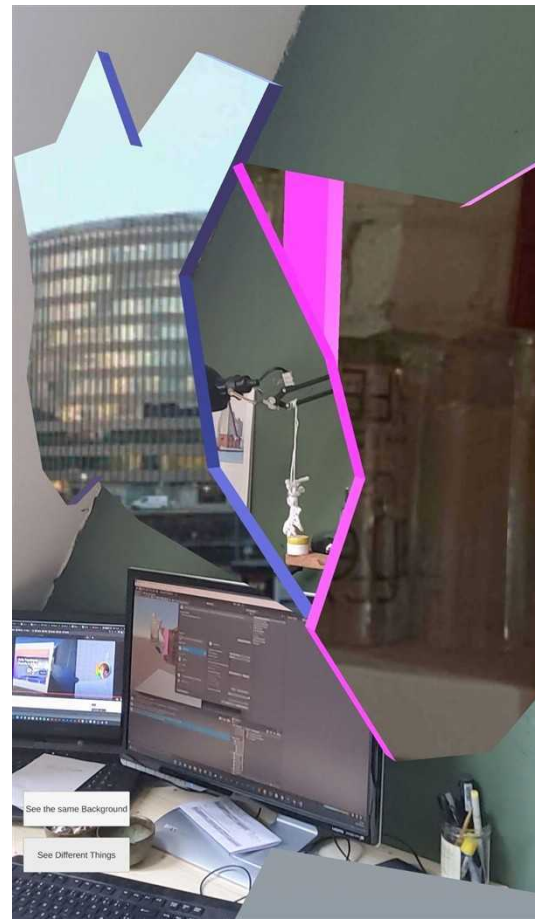

# 360 fotos & image collage

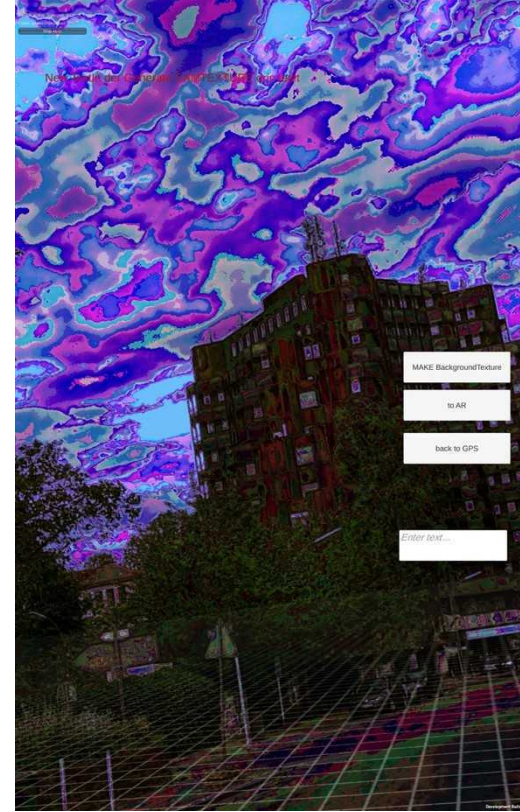

# Perspective Setup in Unity

# Stencil Shader for Shard

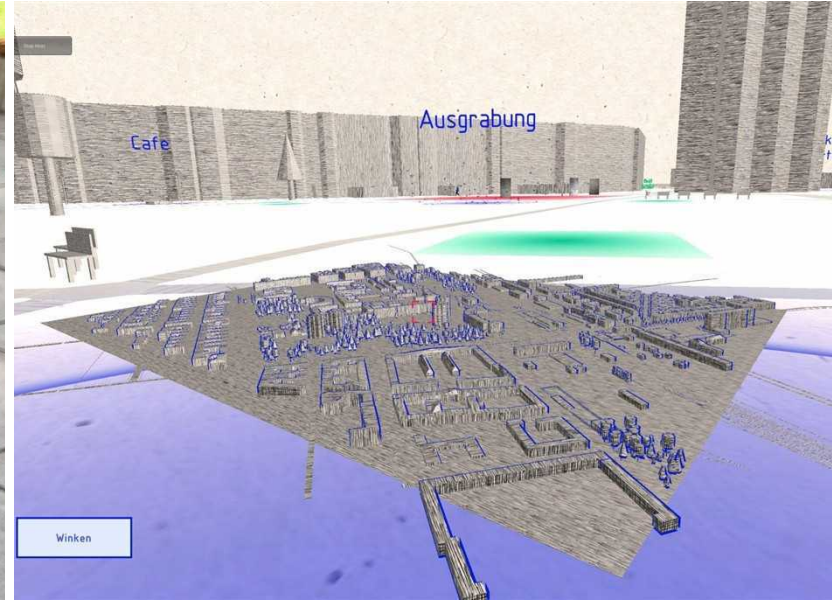

# Modifying AR Background

# Case Study: INBETWEEN

# INBETWEEN - Die Andere Stadt

## location based AR Multiplayer Theater

Premiere: Autumn 2022 | Schaubude Berlin | Artistic Direction, Code: Sarah Buser | Game-Design, Acting: Caspar Bankert | 3D-Design, Illustration: Tomás Montes Massa | Dramaturgy: Anna Vera Kelle | Artistic Collaboration, Code, UI-Design: Judith Hanke | Acting: Annalena Steiner | Video: Panther Reh

# Two Groups

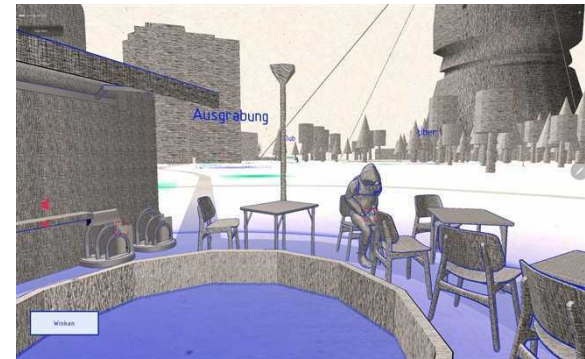

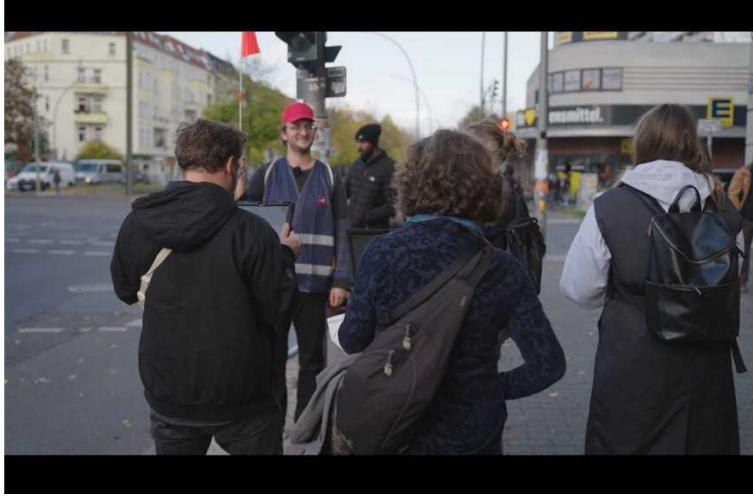

“City -Tour” in Berlin Park, with Augmented Reality Tablet

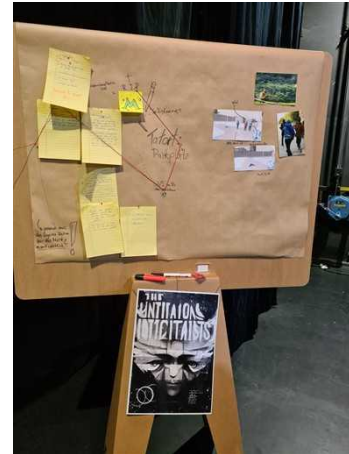

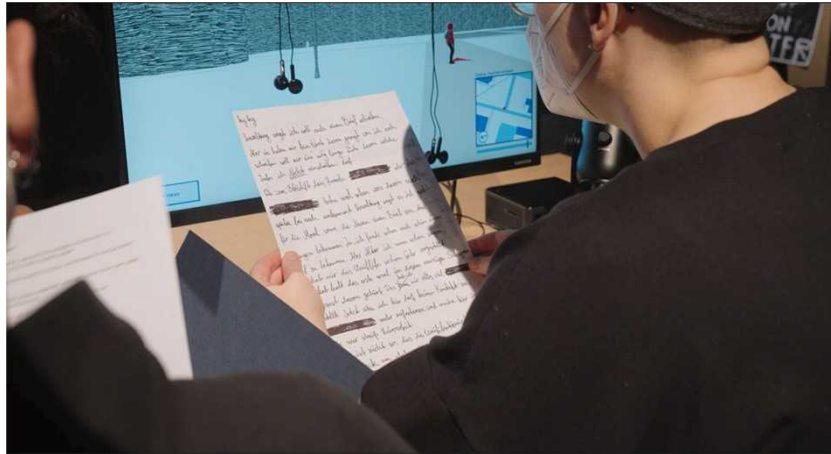

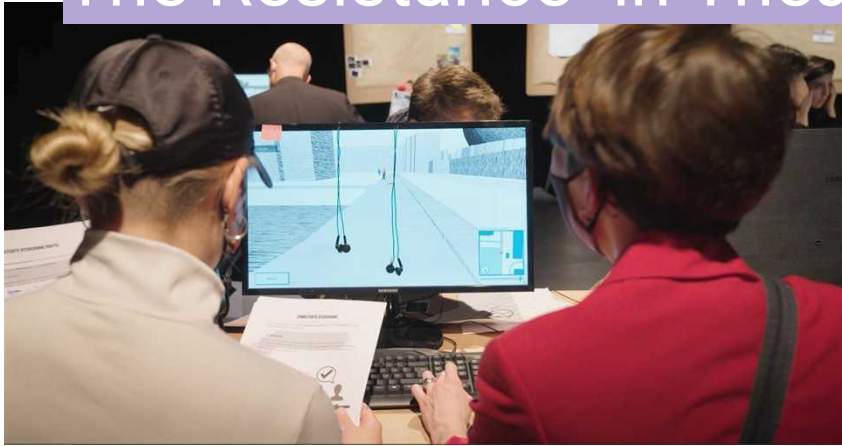

Hideout of the Resistance, “Virtual Reality” on Desktop Computer

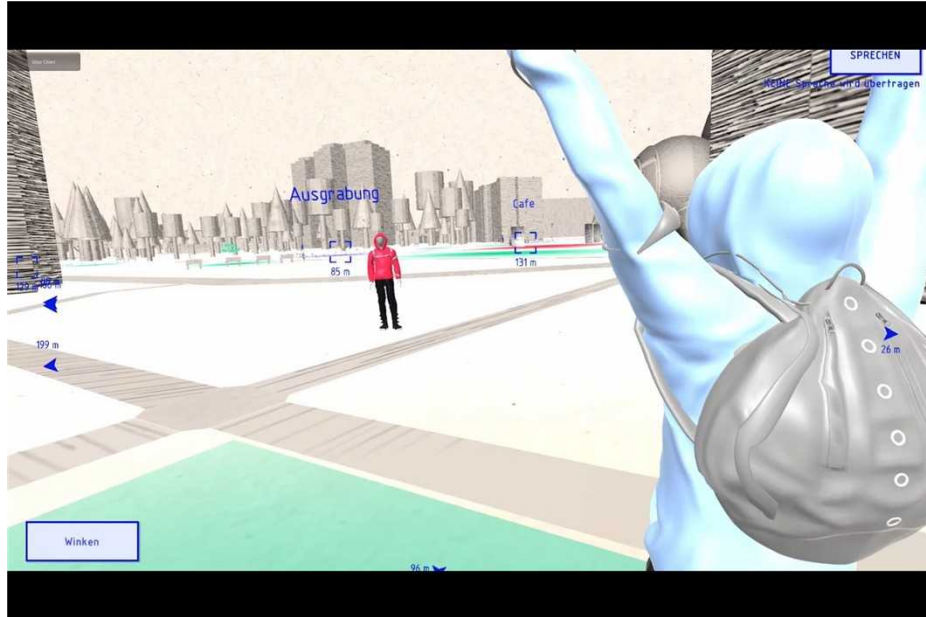

# City Tour - Ernst Thälmann Park

# The Resistance- in Theater Venue

# Communication in shared virtual space

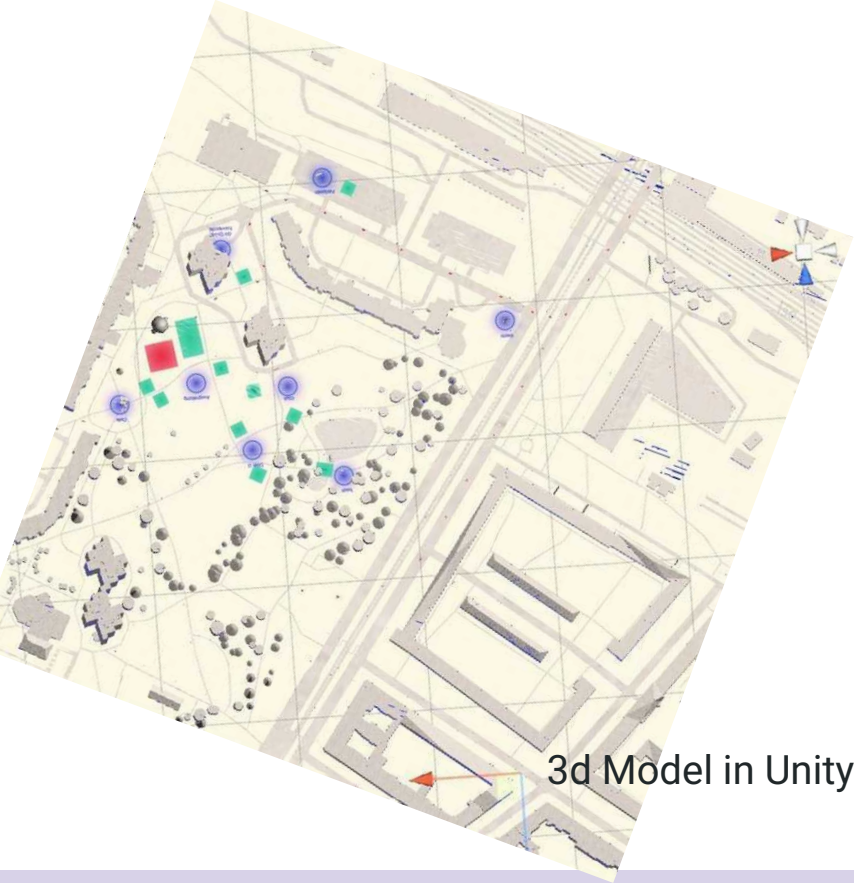

# Shared Virtual Space

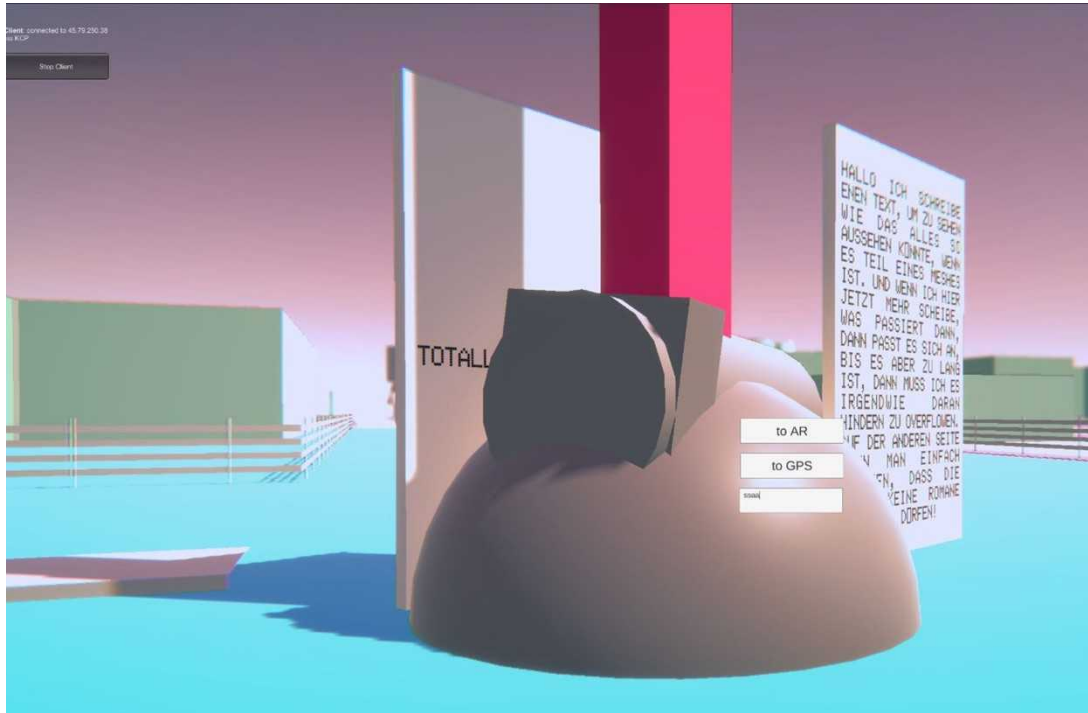

<https://www.openstreetmap.de/karte/>

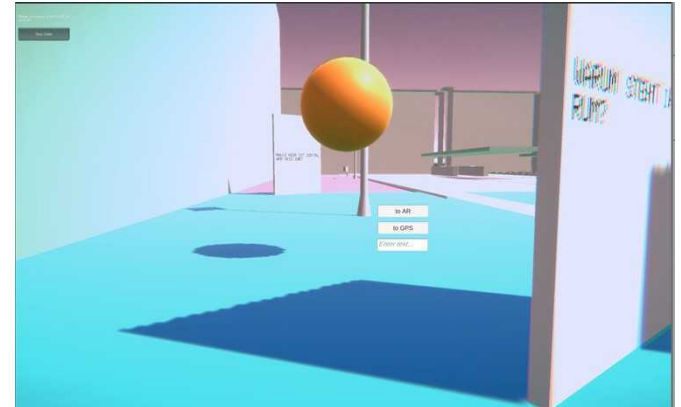

3d Model in Unity Scene

# Technical Prototype

- Connecting GPS Coordinates with Unity Coordinates
- Network Transforms
- Networked Writing
- Scouting interesting Places IRL

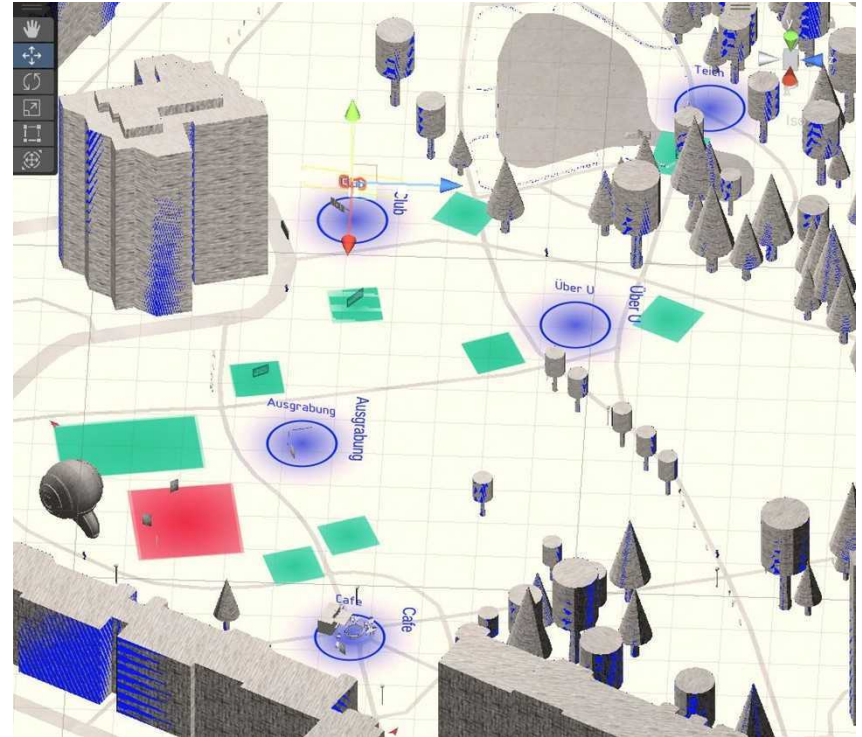

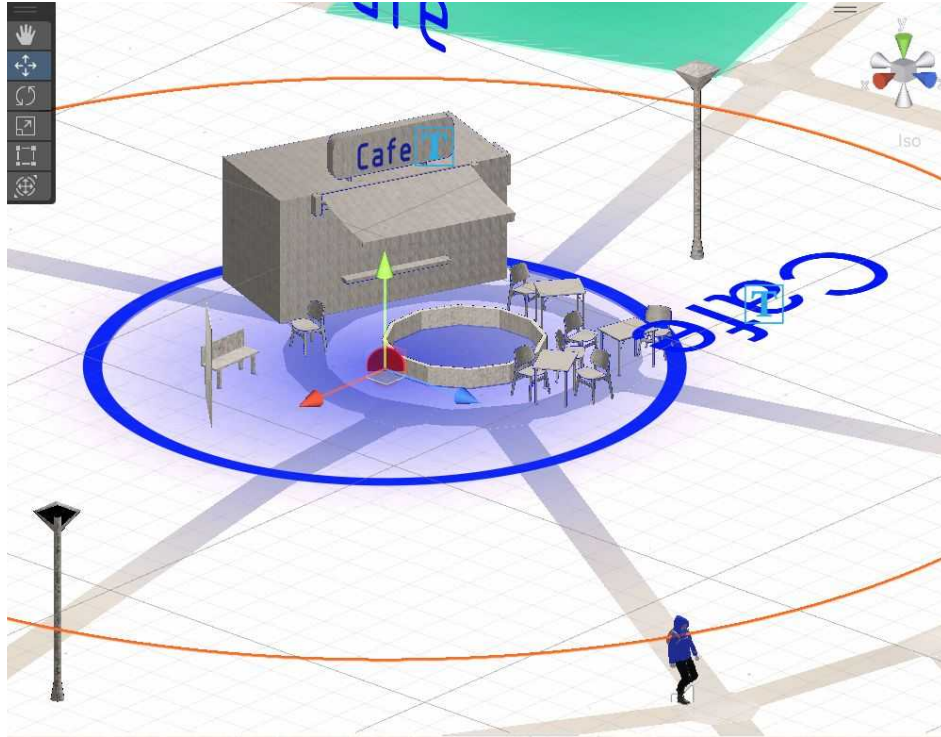

# Playtesting and Iterations

- Testing interaction with people that don't know it yet
- Figure out bugs
- Figure out what is understandable, what isn't
- figure out how they interact with the system
- like rehearsing in theater

# Implement Assets / Polish Scene

further considerations

# Virtual Reality

# Design Challenges for Virtual Reality

# VR Design Challenges

## Narrative

- attention economy
- non-linear storytelling
- first person perspective
- pace / speed

# VR Design Challenges

## Embodiment

- physical body in virtuality
- representation of body in virtuality
- include other senses

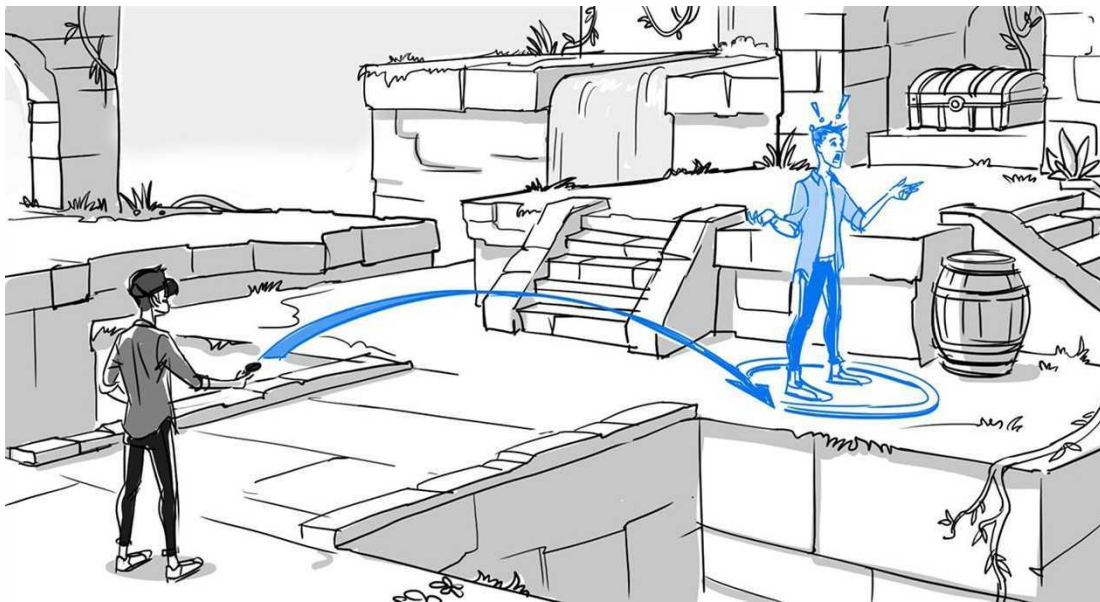

a machine to be another, <https://beanotherlab.org/home/work/tmtba/body-swap/>

# VR Design Challenges

## Locomotion

- save and intuitive movement
- include locomotion into the narrative (fish hook, magnifying glass, etc.)
- locomotion as freedom

Source: meta

# VR Design Challenges

## Physics

- interact with / act into the virtual world
- rules of the virtual world VS the physical world
- gap/dissonance between physical experience and virtual experience

Slaap Lekker by Jeffrey van de Geest, © MaxGrosser

# VR Design Challenges

## Interfaces

- Integration of Information without using flat screens placed in 3D world?
- navigation between different parts/chapters/scenes of the experience
- integrating 2D panels into the 3D world OR “navigating” the interface with your body OR ...?

spatialized chapter navigation in “Quantenwelt” by Sophie Kirchner

# VR Design Challenges

## Accessibility

- Onboarding
- Awareness of the isolating effect
- how to integrate instructions into the experience/narrative
- assistance / support during the experience

VR\_I: Jilles Chobin (2017):  
<https://vimeo.com/246280660?fl=pl&fe=vl>

# VR Design Challenges

## Hardware

- diverse hardware requirements for a VR experience
- adapt experience to different hardware with different capabilities
- optimise experience for mobile devices with limited performance

A VPL (Virtual Programming Languages) Research DataSuit, 1989. Source: wikipedia

meta Quest 3, Source: meta

# VR Design Challenges

## further considerations

- distribution
- archiving
- stage the physical space around the vr experience
- integrate the VR Device into the experience
- linking VR with other hardware/software

Mundo Pemón by Ana Lodeiros Lorena Velasquez

© Marshmallow Laser Feast

# Augmented Reality

# Design Challenges for Augmented Reality

# AR Design Challenges

## World Space

- mapping virtual objects onto the physical world
- advising audience in the physical space
- size and scale of AR objects
- adding physical elements in the physical world for the AR objects to work
- the physical world is stronger (cars, weather, general public)

Antropka by Maria Vogt:

<https://www.theater-an-der-ruhr.de/de/programm/stuecke/8096-antropka-ua>

# AR Design Challenges

## Screen Space

- in AR the frame is the screen is also the interface
- 2D (UI) and 3D (Augmented Physical World) compete for attention
- UI in 3D space, as 3D located panels OR dividing semantic layers
- directing the eye in these two different (overlapping) spaces

# AR Design Challenges

## Interactions

- traditional mobile phone screen interactions VS new kinds of interaction (walking around the room, instead of zooming in/out of the screen)
- using devices/sensors/hands as input devices
- physics

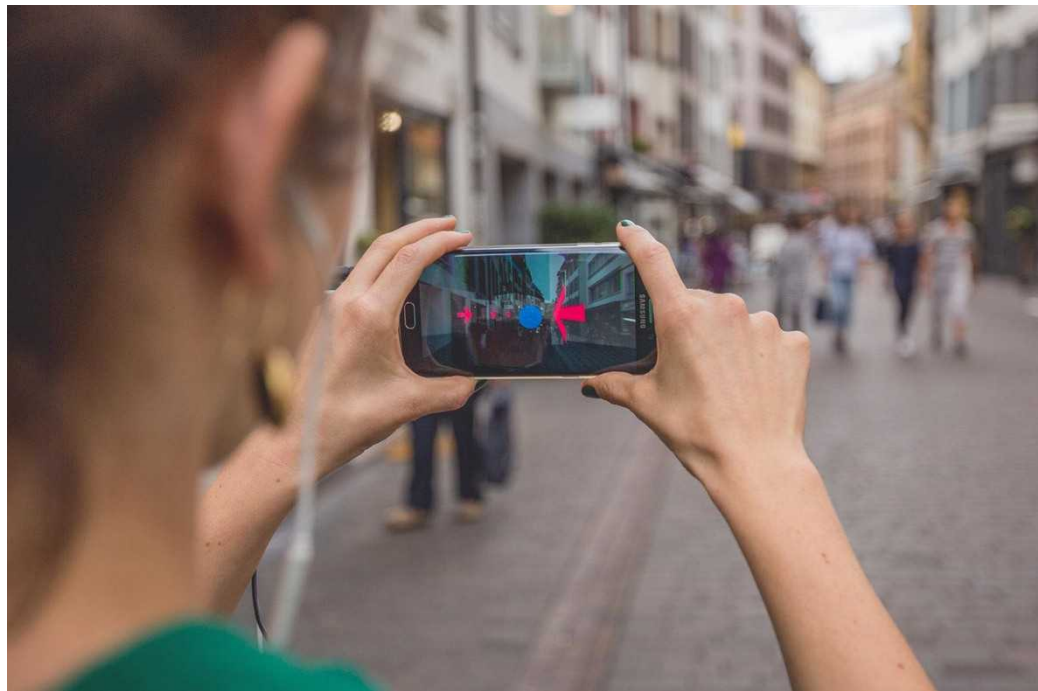

<https://hturan.com/>

Zach Liebermann, Audio in Space

# AR Design Challenges

## Accessibility

- Experience/App available in the store or on specific devices at a venue, or simply on the web
- does the experience require the user to move around / stand /perform any kind of physical (inter)action outside of screenspace
- audio/subtitles, language, speed of experience, different knowledge of handling AR / mobile phones
- who is the audience?

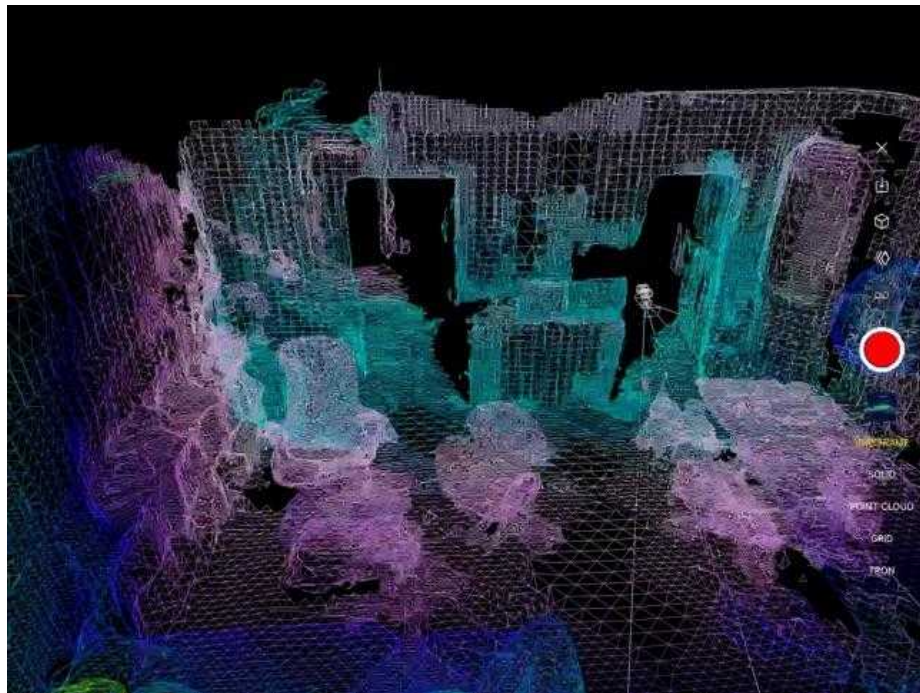

Future Is Now, 2017

# AR Design Challenges

## Hardware

- optimise the experience to run on limited hardware capacity / older models
- have different built versions for different generations of hardware
- what technical requirements does the AR experience have (LiDAR, SLAM, image tracking, GPS, sensors, processors, etc.)

Lidar Camera (App Store)

# AR Design Challenges

## Audience

- how to make the device part of the experience itself?
- Instructions
- Attention economy if the experience is on the users private device
- different levels of knowledge

Hier und Dort, 2018

# Personal Projects

# Personal Projects

## What is the aim?

- Prototype a short VR/AR experience using your existing Unity knowledge + available assets
- have a least one interaction in your experience
- think about what story you want to tell / what statement you want to make
- include the audience in an interesting way

## Time frame:

- one course afternoon, 2 course mornings + whatever time you want at home (max. 30 hours, including ideation, planning, programming, bugfixing, iterating)

# Possibilities

# Starting points for your Project

- choose a space
- introduce a shift between the physical and virtual space
- play with the notion of immediacy and hypermediacy
- include the viewer/player in a interesting way
- combine this with a topic you are interested in

# Virtual Reality Possibilities

- narrative space (with scenery, audio, text) free to explore
- gallery / exhibition space
- immersive landscape
- play with unusual movements (climbing ladders, swimming, flying, etc.)
- playing with size of landscape (very tiny, very big)
- AR (with passthrough enabled) include the physical space
- what else?

# Augmented Reality Possibilities

- virtual character to interact with
- narrative space to explore
- gallery space
- augment reality (live writing, place objects, etc)
- story in a physical space, guided through with AR
- what else?

# Mini-Pitch

# Sketch and Present your Idea

**DATE**

17.11.25

**Mini-Pitch**

visualise and present your idea and your planned next steps

**Duration**

6-8 min per group

after each group we will have a short Q&A to comment, associate and clarify
